Airyzone SDK 版本: v0.1109.1

支援 iOS 版本:ios 9.0 以上

支援程式語言: Swift 3.0 以上, Objective-C

一、設定 Project

1.BLESDK.framework 置入 Project, 並且加入至 Embedded Binaries:

- 2.加入相依的 Frameworks · 或使用 Cocoapods
- A. AFNetworking
- B. Alamofire
- C. CoreBluetooth
- D. iOSDFULibrary
- E. Zip

二、開始使用 SDK

1.初始化 BeaconAPI

_ = BeaconAPI.sharedInstance.initAPI(APPID: AIRYZON_APP_ID, APPKey: AIRYZON_API_KEY)

APPID:申請之APPID

APPKey:申請之APPKey

2.申請使用者

```
public func RegisterUser( UserID userId:String, FireBaseKey firebaseKey:String, completeHandler handler:ApiCompletionHandler?) -> Void
```

UserID:使用者帳號

FireBaseKey: Firebase的 api key,可以為 nil

建立 ApiCompletionHandler 實例

response 格式範例:

```
{
    "status": "OK",
    "msg ": ""
}
```

status:值"OK"為申請成功,"Fail"為失敗

msg:若 status 為"OK",則為空值,反之,會回傳錯誤訊息

3.查詢使用者裝置清單

public func getUserDeviceList(UserID userId:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

response 格式範例:

status:值"OK"為查詢成功

msg: 回傳訊息 list : 裝置清單

4.搜尋裝置

```
public func scanBeacon(Timer timer:TimeInterval,_ completionHandler: @escaping ScanCompletionHandler) - > Void
```

Timer:需要 Scan 的秒數

建立 ScanCompletionHandler 實例

```
BeaconAPI.sharedInstance.scanBeacon(Timer: 2.0, { (state:BeaconAPI.ScanState) -> Void in

if state == BeaconAPI.ScanState.Success

{

// var discoveredPeripherals:[mBeacon]

var discoveredPeripherals:[mBeacon] =

BeaconAPI.sharedInstance.getBeaconList()

}

else if state == BeaconAPI.ScanState.Scanning

{

print("still scanning")

}

})
```

mBeacon 類別

beaconDeviceName(): 裝置名稱

macId:唯一識別碼, Beacon 硬體編號

5.配對裝置

public func bindBeaconWithUser(UserID userId:String, BeaconID beaconId:String, NickName name:String, completeHandler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

NickName: 裝置暱稱

response 格式範例:

status:值"OK"為綁定成功

msg:回傳訊息

6. 解除配對裝置

public func unBindBeaconWithUser(UserID userId:String, BeaconID beaconId:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

response 格式範例:

status:值"OK"為解除綁定成功

msg:回傳訊息

7.開通裝置

public func activateBeacon(_ beacon:mBeacon?, _ completionHandler: @escaping ActivateCompletionHandler)
-> Void

建立 ActivateCompletionHandler 實例

8. 設定丟失

public func setBeaconMissing(UserID userId: String, BeaconID beaconId: String, completeHandler

handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

response 格式範例:

status:值"OK"為成功

msg:回傳訊息

9. 取得丟失清單

public func getBeaconMissingList(UserID userId:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

response 格式範例:

status:值"OK"為成功

msg:回傳訊息

list : 丟失裝置清單

10. Beacon 碰撞回報

public func setBeaconCollision(BeaconID beaconId:String, Latitude lat:Float, Longitude lng:Float, completeHandler handler:ApiCompletionHandler?) -> Void

BeaconID: Beacon 硬體編號

Latitude:使用者目前位置的緯度

Longitude:使用者目前位置的經度

response 格式範例:

status:值"OK"為成功

msg:回傳訊息

11. 取得 Beacon 碰撞回報紀錄

public func getBeaconCollisionLog(BeaconID beaconId:String, completeHandler handler:ApiCompletionHandler?) -> Void

BeaconID: Beacon 硬體編號

response 格式範例:

status:值"OK"為成功

msg: 回傳訊息 list : 裝置清單

12. 取消丟失狀態

```
public func cancelBeaconMissing( UserID userId:String, BeaconID beaconId:String, completeHandler handler:ApiCompletionHandler?) -> Void
```

UserID:使用者帳號

BeaconID: Beacon 硬體編號

response 格式範例:

status:值"OK"為成功

msg:回傳訊息

13. 裝置連線

```
public func connectBeacon(_ beacon:mBeacon?, _ completionHandler: @escaping ConnectCompletionHandler ) ->
Void
```

beacon: mBeacon 實體

```
BeaconAPI.sharedInstance.connectBeacon(beacon, { (state:BeaconAPI.ConnectState) -> Void in

if state == BeaconAPI.ConnectState.Connected

{
    //Beacon Connected
}
else if state == BeaconAPI.ConnectState.ConnectFailed

{
    //Beacon Connect Failed
}
```

14. 裝置斷開連線(需連線後才能操作)

```
public func disConnectBeacon(_ beacon:mBeacon?, _ completionHandler: @escaping

DisConnectCompletionHandler ) -> Void
```

beacon: mBeacon 實體

操作範例:

```
BeaconAPI.sharedInstance.disCoonectBeacon(beacon, { (state:BeaconAPI.ConnectState) -> Void in

if state == BeaconAPI.ConnectState.Disconnected

{
    //Beacon Disconnected
}
else if state == BeaconAPI.ConnectState.DisconnectFailed

{
    //Beacon Disconnect Failed
}
})
```

15. 使用蜂鳴器 (需連線後才能操作)

```
public func callBuzzerWithValue(_ beacon:mBeacon?, _ value:UInt8 ) ->
Bool
```

beacon: mBeacon 實體

value: 蜂鳴器的調整值(1~80), 建議值為 52 or 64

```
let bResult:Bool = BeaconAPI.sharedInstance.callBuzzerWithValue(m_pBeacon, 64)
```

16. 讀取電量(需連線後才能操作)

 $public func \ read Battery (_beacon: mBeacon?, _completion Handler: @escaping \ Read Battery Completion Handler)$

beacon: mBeacon 實體

操作範例:

BeaconAPI.sharedInstance.readBattery(m_pBeacon,{ (responseDic) -> Void in

})

responseDic 格式範例:

status: 狀態 (low battery or battery level high)

volt:電壓值(單位:v)

power:電量百分比(單位:%)

17. 上傳紀錄 (需連線後才能操作)

```
public func \ update DataLog(\_beacon:mBeacon?, \_userID:String, \_beaconID:String, \_completionHandler: @escaping \\ UploadDataLogCompletionHandler)
```

beacon: mBeacon 實體

UserID:使用者帳號

BeaconID: Beacon 硬體編號

```
BeaconAPI.sharedInstance.updateDataLog(m_pBeacon, userID, beaconID, { (state) -> Void in

if state == BeaconAPI.UploadDataStatus.success

{

//上傳成功
}
else
{

//上傳失敗
}
```

18. 依指定日期取回紀錄

public func getDataByDate(UserID userId:String, BeaconID beaconId:String, Date date:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

Date:日期(格式:YYYY-MM-dd)

操作範例:

```
BeaconAPI.sharedInstance.getDataByDate(UserID: userID, BeaconID: beaconID, Date: "2017-06-19", completeHandler: { (response) -> Void in }
```

response 格式範例:

status:值"OK"為成功

msg:回傳訊息

list : 紀錄清單

temperature 溫度

humidity 濕度

low

high

time 時間

19. 依指定年月取回紀錄

public func getDataByMonth(UserID userId:String, BeaconID beaconId:String, Month date:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

Month:日期(格式:YYYY-MM)

操作範例:

```
BeaconAPI.sharedInstance.getDataByMonth(UserID: userID, BeaconID: beaconID, Month: "2017-06", completeHandler: { (response) -> Void in }
```

response 格式範例:

status:值"OK"為成功

msg: 回傳訊息 list : 紀錄清單

temperature 溫度

humidity 濕度

low

high

day 日期

20. 依指定年取回紀錄

public func getDataByYear(UserID userId:String, BeaconID beaconId:String, Year date:String, completeHandler handler:ApiCompletionHandler?) -> Void

UserID:使用者帳號

BeaconID: Beacon 硬體編號

Year:日期(格式:YYYY)

操作範例:

```
BeaconAPI.sharedInstance.getDataByYear(UserID: userID, BeaconID: beaconID, Year: "2017", completeHandler: { (response) -> Void in }}
```

response 格式範例:

status:值"OK"為成功

msg: 回傳訊息 list : 紀錄清單

temperature 溫度

humidity 濕度

low

high

month 月份

21. 讓裝置進入 Bootloader 模式 (需連線後才能操作)

```
public func enableBootLoader(_ beacon:mBeacon?, completeHandler
handler:EnableBootLoaderCompletionHandler?) -> Void
```

beacon: mBeacon 實體

操作範例:

注意事項:進入 Bootloader 後,Device 會自動斷線,避免在這裡來不及取得回傳的 Handler status,所以需要事先監聽 Notification

```
NotificationCenter.default.addObserver(self, selector:
#selector(handleNotificationForBleDisconnected), name:
Notifications.POST_NOTIFICATION_DISCONNECT, object: nil)
```

22. 執行 OTA 功能 (需連線後才能操作)

```
public func performDFU(_ aFileURL:URL)
```

aFileURL: firmware 的 file url path

```
if let resourceUrl = Bundle.main.url(forResource: "collar_dev_104", withExtension: "zip",
subdirectory: "")
{
      //需先設定委派,並且需要實作 BeaconAPIDelegate
    BeaconAPI.sharedInstance.delegate = self
      BeaconAPI.sharedInstance.performDFU(resourceUrl)
//實作 BeaconAPIDelegate
extension YourViewController : BeaconAPIDelegate
   func dfuProgressUpdate(for part: Int,
                        outOf totalParts: Int,
                        to progress: Int,
                        currentSpeedBytesPerSecond: Double,
                        avgSpeedBytesPerSecond: Double) -> Void
   {
       dfuUploadStatus.text = String(format: "Part: %d/%d\nSpeed: %.1f KB/s\nAverage Speed:
%.1f KB/s",part, totalParts, currentSpeedBytesPerSecond/1024, avgSpeedBytesPerSecond/1024)
   func dfuStatusUpdate(to state: BeaconAPI_DFUState) -> Void
       dfuStatusLabel.text = state.description()
       print("Changed state to: \(state.description())")
   }
```

注意事項:當 BeaconAPI_DFUState 回傳值為 completed,表示 DFU 結束

23. 檢查裝置是否配對

```
public func checkBeaconExist( BeaconID beaconID:String,
completeHandler handler:ApiCompletionHandler?) -> Void
```

BeaconID: Beacon 硬體編號

操作範例:

```
BeaconAPI.sharedInstance.checkBeaconExist(BeaconID:
beacon.macId, completeHandler: { (response) -> Void in
})
```

response 格式範例:

status:值"OK"為裝置已經有被配對了

msg:回傳訊息

24. 檢查裝置是否開通

```
public func getBeaconInfo( BeaconID beaconID:String, completeHandler
handler:ApiCompletionHandler?) -> Void
```

BeaconID: Beacon 硬體編號

操作範例:

response 格式範例:

status:值"OK"為已開通

msg:回傳訊息

25. DFU 裝置連線

```
public func connectOTABeacon(_ beacon:mBeacon?, _ completionHandler: @escaping ConnectCompletionHandler ) - > Void
```

beacon: mBeacon 實體

```
BeaconAPI.sharedInstance.connectOTABeacon(beacon, { (state:BeaconAPI.ConnectState) -> Void in

if state == BeaconAPI.ConnectState.Connected

{
    //Beacon Connected
}
else if state == BeaconAPI.ConnectState.ConnectFailed

{
    //Beacon Connect Failed
}
```
